

Old photo effect

Start by opening this picture using Adobe Photoshop or any picture you want. Then desaturate the picture by pressing SHIFT+CTRL+U.

Go to Filter>Noise>Add noise.

There set these values.

Now go to Filter>Render>Lightning effects. Try to set it like in the picture.

Go to Filter>Texture>Grain and set these values.

Now let's make the old effect even better. Create a new layer by pressing SHIFT+CTRL+N. Fill it with white colour. And set the opacity to 24%.

Now create again a new layer. SHIFT+CTRL+N and fill it with this colour #979745.

Set the opacity to 25%.

Now let's duplicate this layer.

Right click the new layer and go to Blending option.

There set these values. Use this colour #e3e2ce.

And there you have it. An old photo effect.
